

NESH ROCHWANI

San Mateo, CA | (737)-350-6930 | neshrochwani121@gmail.com | [linkedin.com/in/nesh-rochwani/](https://www.linkedin.com/in/nesh-rochwani/) | github.com/nr1306/

SUMMARY

Software engineer who builds full-stack product workflows for systems where reliability, visibility, and real-world feedback matter. Experienced across React/Next.js, Node.js, FastAPI, APIs, authentication, real-time device workflows, structured logging, and debugging production-style issues.

EXPERIENCE

Find Me LLC | *Full Stack Developer*

Jul 2025 - Sep 2025

- Designed and maintained full-stack product workflows for a production SaaS platform using Node.js, Express, MongoDB, GraphQL, and React-facing APIs, supporting reliable data exchange between frontend and backend services.
- Built and validated backend API contracts through Swagger-based testing, catching schema mismatches, request-handling issues, and frontend/backend integration gaps before release.
- Integrated Apple Sign-In with OAuth 2.0 and standardized authentication flows across client and backend touchpoints, making access patterns more secure, consistent, and maintainable.
- Refined backend logic and implemented structured logging, request IDs, and standardized error handling to improve reliability across production workflows, reducing debugging time and helping prevent repeat release issues.

NXON AI Pvt Ltd | *Software Developer*

Jan 2024 - Jun 2024

- Developed C++/Qt components for an IoT control platform to manage device state changes and real-time dashboard updates, enabling responsive monitoring and control across 20+ devices.
- Built MQTT-based device communication workflows integrated with AWS IoT Core to enable real-time data exchange between devices and the control platform, improving responsiveness and reliability of system interactions.
- Developed a Python-based anomaly detection pipeline for time-series sensor data to automate preprocessing, feature extraction, and model evaluation, improving the repeatability of analysis workflows.
- Worked with engineers to review code, troubleshoot release issues, and refine implementation tradeoffs to improve system reliability and support faster production delivery.

PROJECTS

VentureScope

- Built a multi-agent AI due diligence platform that fanned out company analysis across specialized Market, Financial, Competitor, and Risk agents, then synthesized results into a structured report.
- Engineered an async end-to-end architecture using FastAPI, Celery, Redis, Postgres, pgvector, and Next.js, enabling parallel agent execution, web and document retrieval, report persistence, and non-blocking analysis workflows.
- Strengthened system reliability and trust by implementing input/output guardrails, citation enforcement, LLM-as-judge and deterministic eval pipelines, and Langfuse observability, making generated reports more traceable, reviewable, and production-ready.

PrepWise – AI Mock Interview Platform

- Built a real-time AI mock interview platform that enabled users to practice interviews with AI agents through interactive voice-driven sessions.
- Designed application workflows using Next.js, Tailwind CSS, Vapi, and Firebase to handle session management, prompt delivery, and real-time feedback with low-latency interactions.
- Implemented tracing and structured logging to monitor product behavior, identify failure patterns, and improve reliability through repeatable debugging and iteration.

Ticker

- Built an ambient Electron desktop widget for live stock tracking across portfolio and watchlist views without interrupting workflow, using a background IPC polling pipeline and a frameless, always-on-top overlay that dims at idle and surfaces on hover.
- Reduced research time for stock decisions by engineering an AI recommendation engine using GPT-4o that synthesized live market data and portfolio holdings into actionable insights, backed by a SQLite caching layer to avoid redundant API calls and persist recommendations across sessions.
- Eliminated blind spots in volatile markets by building a smart alert system with price triggers, native desktop notifications, and an AI-powered news pulse, using NewsAPI + GPT-4o-mini to summarize relevant updates and a typed IPC layer to persist alert history and unread badge state.

TECHNICAL SKILLS

- Programming Languages:** JavaScript, TypeScript, Python, SQL, Java, C++, Go, CSS
- Web & Frameworks:** FastAPI, Flask, Node.js, Express, REST API Design, React, OpenAPI/Swagger, OAuth2, JWT, Next.js, GraphQL
- Cloud & Databases:** AWS, Docker, Linux, CI/CD Pipelines, Github, Kubernetes, CloudWatch, Terraform (IaC), Bash, Supabase, PostgreSQL
- AI Tools:** OpenAI APIs, GPT, Gemini, Claude, Cursor, Copilot, LLM Agents, RAG Architecture

EDUCATION

Illinois Institute of Technology

Master of Science, Computer Science (GPA: 3.4 /4.0)

May 2026

Chicago, IL

- Coursework:** Med Informatics & AI, Design and Analysis of Algorithms, Big Data Technologies, Advance Database Organization

Charusat University

Bachelor of Technology, Information Technology (GPA: 3.7 /4.0)

May 2024

Nadiad, Gujarat, India

- Coursework:** Data Structures & Algorithms, Operating System, Full stack development, Statistical and Numerical Techniques
